Automatic report
=====

Study ID: David_Kleijn_Vaccinium_macrocarpon_USA_1990

Contact: david.kleijn@wur.nl

Credit: Kenna E. Mackenzie, Anne L. Averill, David Kleijn

Publication: 10.1093/aesa/88.3.334

Number of sites: 8

Year of sampling: 1990

Crop: Vaccinium macrocarpon

Variety: There are missing varieties (given 0 out of 8).

Location: Full information.

Country: All reported countries are OK.

Field size: There are missing field sizes (given 0 out of 8).

Management: There are missing results for management (given 0 out of 8).

Sampling period: Full information.

Richness: Full information.

species groups considered: only bees

Abundance: Full information.

Visitation rate units: NA

Visitation rate: There are missing values (given 0 out of 8).

Yield units: NA

Yield: NA

Alternative yield units: NA

Alternative yield: NA

Queries
=====

Instructions: Please, edit this file and answer the following queries within the document, one by one. Then send the edited 'Summary_report_and_queries' (with your comments) and your 'Data_ownership' (excel) file to alfonso.allen.perkins+observeddataset@gmail.com before the 20th of July.

- =====
- Please check that credit information is correct and add the corresponding affiliations and acknowledgements/funding information in your 'Data_ownership' (excel) file.
 - If your study is already published, please check that its DOI is correct.
 - If possible, please provide the names of missing crop varieties.
 - If possible, please provide the area of each field [in hectares].

- If possible, please assign a management category [organic, IPM, conventional] to each field.
- There are sites without visitation rate records. Please, check that such information is correct. See also the information about OBServ data processing in your ‘First read me - General report’ pdf file.
- Please, check that the brief description of your methodology (in your insect_sampling file) is correct.
- If possible, please, provide yield information.
