Study ID: Shalene_Jha_Coffea_arabica_robusta_Mexico_2006

Contact: sjha@austin.utexas.edu

Credit: Shalene Jha and John H. Vandermeer

Publication: 10.1111/j.1600-0706.2009.17523.x

Number of sites: 9

Year of sampling: 2006

Crop: Coffea arabica/robusta

Variety: There are missing varieties (given 0 out of 9).

Location: Full information.

Country: All reported countries are OK.

Field size: There are missing field sizes (given 0 out of 9).

Management: There are missing results for management (given 0 out of 9).

Sampling period: Full information.

Richness: Full information.

species groups considered: only bees

Abundance: There are missing values (given 0 out of 9).

Visitation rate units: flowers visited per hour

Visitation rate: Full information.

Yield units: NA

Yield: NA

Alternative yield units: NA

Alternative yield: NA

Queries
=====

Instructions: Please, edit this file and answer the following queries within the document, one by one. Then send the edited 'Summary_report_and_queries' (with your comments) and your 'Data_ownership' (excel) file to alfonso.allen.perkins+observeddataset@gmail.com before the 20th of July.

- =====
• Please check that credit information is correct and add the corresponding affiliations and acknowledgements/funding information in your 'Data_ownership' (excel) file.
• If your study is already published, please check that its DOI is correct.
• If possible, please provide the names of missing crop varieties.
• If possible, please provide the area of each field [in hectares].

- If possible, please assign a management category [organic, IPM, conventional] to each field.
- There are sites without abundance records. Please, check that such information is correct. See also the information about OBServ data processing in your ‘First read me - General report’ pdf file.
- Please, check that the brief description of your methodology (in your insect_sampling file) is correct.
- If possible, please, provide yield information.
- According to your published paper, within the two agroforestry habitat types, 124 observation sessions were conducted, 15 min each. However we only found 114 observations. On the other hand, our estimations point out that there are sessions longer than 15 min. Nonetheless, we used 15-min per session to perform our calculations.
